

# Transloaders

Flexible, Economical  
Loading/Unloading

**Solutions for NGL,  
LPG, Butane**

## All the Benefits of Rail Delivery - Without All the Cost

Our **transloading solutions** deliver all the speed, flexibility and economics of rail freight transportation, while letting you bypass the wait for pipeline expansion—and avoid hefty onsite rail infrastructure investment.

For **remote locations**, transloading is quickly implemented to facilitate the movement of liquids from wellhead storage facilities to tank trailers. Product is then transported to ideal rail, pipeline or refinery destinations, making your operations profitable—long before new pipeline and railway infrastructure makes its way to your location.

For **all applications**, we offer fast-ship standard configurations or custom designed and engineered transloading solutions to meet your exact specifications and site details. Whether you need to move liquids from wellhead to rail car or tank truck; tank truck to rail car; or rail car to tank truck; we offer reliable, accurate transfer solutions—all engineered to the highest safety standards and designed for maximum ease of use and efficiency.

- **Standard Configurations & Custom Engineered**
  - **Seamless Truck & Rail Hand-off**
  - **Fast, High Capacity Flow Rates**
  - **Loading, Unloading & Vapor Recovery**

**Safety First** - All solutions include electrical grounding/bonding, ESVs, break-away protection & other safety features. OSHA compliant.

## Cart Mounted Options

- Cost effective choice when top tank access is not required
- Fast-ship solution
- Simple operation and easy on site portability
- Suitable for moving liquids from tank cars to truck transports
- Simple set-up
- Fully designed, built, and tested off-site
- Standard configurations available or custom engineered, designed & built

**Ease of Use** - Our pre-manufactured solutions are fully assembled, pre-wired & pre-programmed to get your operations up-and-running—*fast*.

**Choose Your Options** - from pumps, valving, instrumentation & metering options to pressure-tested UL listed hoses and more to suit your needs.

## Trailer Mounted Options

- Offers the greatest flexibility
- Safe and stable access to the top of rail cars
- Easily towed to other job sites
- Completely self-contained; no disassembly/reassembly required when relocating
- Optional metering & ticketing for custody transfer
- Pump & compressor options to suit your needs
- Standard configurations available or custom engineered, designed & built
- Fully designed, built and tested off-site

## Skid Mounted Options

- Robust solutions well-suited for high-volume, semi-permanent applications
- Operator visualization and controls, automation, and MCC options
- Fully designed, built, and tested off-site for rapid installation & startup
- Rapid unloading delivers on productivity—and profitability
- Standard configurations available or custom engineered, designed & built

## Rail Towers & Terminal Operations

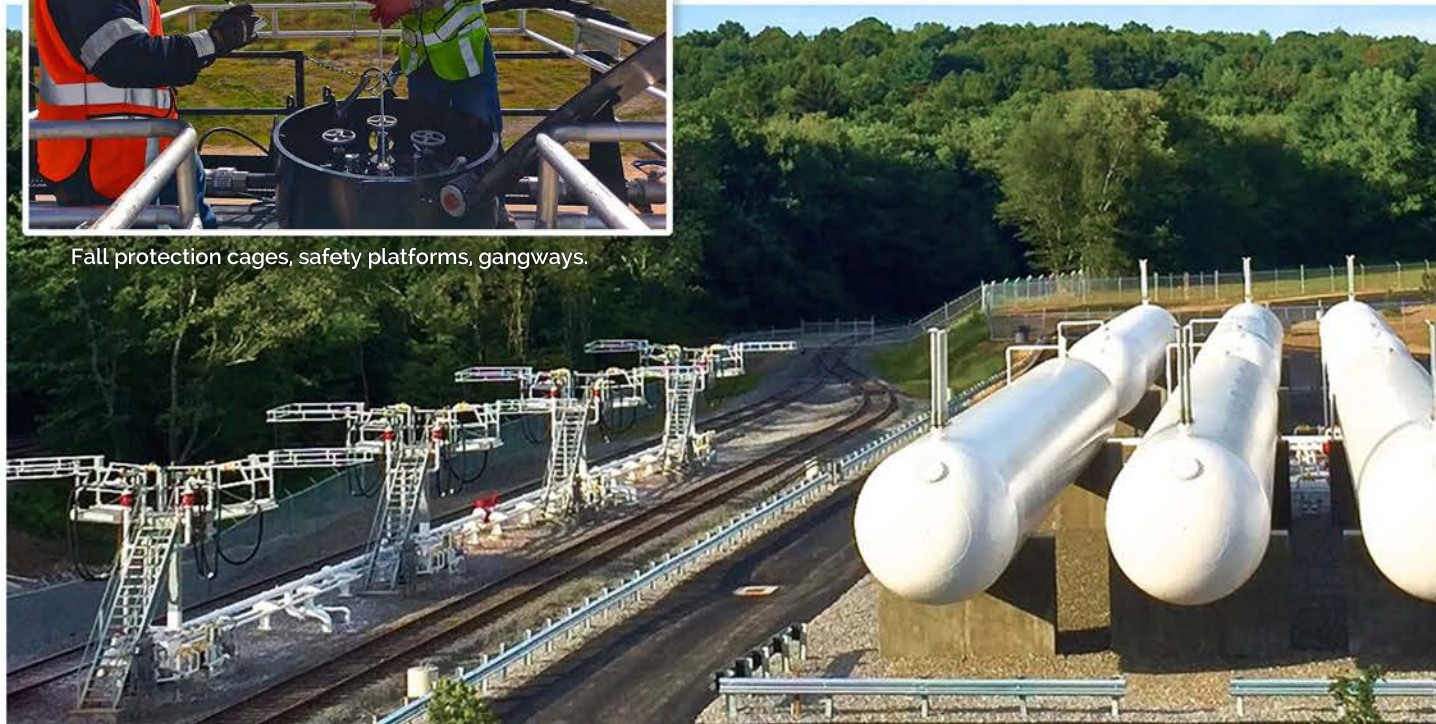

In addition to our mobile and portable transloading solutions, TransTech offers large scale, permanent rail tower installations and storage & distribution terminal design, engineering and construction services to support all your liquid transfer needs.

From single- to multi-car rail unloading operations

Fall protection cages, safety platforms, gangways.

Start-up & commissioning, training and maintenance services.

## Call Us Today

Backed by over five decades of experience serving energy markets, we design and build all transloading solutions to the highest standards to meet with or exceed all ASME codes and comply with all OSHA safety requirements.

Call us today to speak with one of our transloading solutions experts to learn more: **(+1) 888-206-4563.**
